- Sacrificial anodes are specifically designed to protect parts of your personal watercraft that are underwater from galvanic corrosion.
- Like the name implies, they essentially "sacrifice" themselves by absorbing the electrochemical process of corrosion to prevent metal components like the impeller, jet pump nozzle or engine from being "eaten away" instead.

- Galvanic corrosion can cause major damage if not controlled.
- Inspect your sacrificial anode at least once a month.
- Replace it when it is 50% depleted.

Sizing Chart

HOW TO MEASURE

For best results, have someone else take measurements. Measure body in swimsuit or undergarments. Tape must be snug but not tight. If measurements fall between two sizes, order the larger size.

Chest

Measure under your arms, around the fullest part of your chest.

Waist

Measure around your waist at the narrowest place.

Hips

Stand with legs together, measure around the widest part of your hips, ensuring the tape is level.

Arm Length

Let your arms hang down at your sides in a slightly bent position. Measure from the center of the back of your neck, along the length of your arm, to the wrist.

Inseam

Without shoes, from crotch to the floor.

What code represents your size?
